- *DSS-AA300 – DIT's 300 watt audio amplifier*

Please feel free to consult with a Sales Engineer for additional information or visit our web site.

Secure Indoor / Outdoor Enclosure

The satellite receiver, the video splitter, power supply for panels, the audio amplifier, the player; Where do you put it all, so it is in a safe, secure, and compact environment?

DIT's answer to this problem is the DSS – PE221! It is designed to be wall mounted, and to be located in such a way that all connections terminate inside this enclosure.

This design allows for it to be installed indoors (Electrical / Maintenance Room, Ceiling Crawl Space, etc.), or outdoors (under rafter, on plaster, etc.). Aside from providing a convenient location to store your equipment, it also provides security and protection from the elements.

The DSS-PE221 is an all Aluminum construction solution with a Standard Finish of tan Powder Coat and medium texture, but it can be customized to any color or logo.
